DAMILOLA AYOSHILE AYOOLA

Lagos, Nigeria | Open to Remote Opportunities | dammykenny97@gmail.com
Portfolio: damilola-portfolio-sigma.vercel.app | GitHub: github.com/dammykenny
LinkedIn: linkedin.com/in/ayoolaoluwadamilola

PROFESSIONAL PROFILE

Mathematically trained software engineer and application developer with hands-on experience building data-driven web applications, API-integrated systems, Python automation tools, and audit-focused financial data-processing workflows. Combines software engineering with practical audit experience to design solutions for transaction analysis, financial-data validation, reporting, and business-process automation. Strong foundation in JavaScript, React, Python, REST APIs, data transformation, application architecture, debugging, Excel automation, and Git-based development.

CORE COMPETENCIES

Software Engineering & Web Applications · Frontend & React Architecture · REST API & Service-Layer Design · Audit & Financial Data Automation · Python Automation & Data Processing · Transaction Classification & Financial Analysis · Excel Reporting, Controls & Validation · Exception Detection & Data Quality · Git, GitHub & Deployment · Mathematical & Analytical Problem Solving · Technical Documentation

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), Python, HTML5, CSS3
- **Frontend:** React.js, Next.js, React Router, Context API, reusable component architecture, responsive UI
- **Backend & APIs:** Node.js, Express, FastAPI, REST APIs, JWT authentication, service layers
- **Data, Audit & Automation:** pandas, pdfplumber, PDF/data extraction, transaction classification, financial analysis, balance validation, exception/control checks, Excel automation
- **Databases & Storage:** MongoDB, Mongoose, LocalStorage
- **Tools & Deployment:** Git, GitHub, GitHub Pages, Vercel, Render, Chrome DevTools, Figma, VS Code

SELECTED SOFTWARE, AUDIT & DATA PROJECTS

Financial Statement Analysis & Audit Automation Systems — Python

- Developed reusable Python workflows, used in day-to-day audit work, for processing bank statements and converting transaction data into structured analytical workbooks.
- Implemented transaction extraction and normalization, debit/credit classification, category assignment, counterparty identification, reversal detection, balance validation, exception analysis, control checks, monthly summaries, transaction matrices, and automated Excel reports.

Metamorphosis: Document Processing Platform — In development

- Building a modular FastAPI and Next.js platform for document operations, with a versioned API, separated service layer and documented architecture decisions.
- Currently includes a PDF toolkit (merge, split, remove, extract, reorder, insert, rotate, organize, compress) and PDF-to-Excel table extraction.
- Integrating my Python audit workflows into the platform as an audit service for bank-statement analysis and reporting.

Football Talent: Scouting Platform (Full-Stack)

- Built a full-stack scouting application with React, Node.js, Express and MongoDB, featuring JWT authentication with hashed passwords, and player records that only the creating scout can edit.
- Implemented search by name, position, rating and club, scouting assessment fields (strengths, weaknesses, potential, notes), and video upload with preview and progress tracking.
- Source: github.com/dammykenny/football-talent-app | Live: football-talent-app.vercel.app

My Sports App: React Player Statistics Application

- Built a multi-page React application that searches players through the TheSportsDB API and presents teams, contract history (falling back to transfer history), former teams and recent results.
- Structured the app with a separate API service layer, Context API for shared state, reusable components, and loading, empty and error states. Deployed on GitHub Pages.
- Source: github.com/dammykenny/my-sports-app | Live: dammykenny.github.io/my-sports-app

JavaScript E-Commerce Application

- Built a responsive multi-page e-commerce workflow with cart persistence through LocalStorage, dynamic checkout logic, reusable interface components, and client-side state handling. Deployed through GitHub Pages.

PROFESSIONAL EXPERIENCE

Junior Auditor 2025 – Present

Oshin Kehinde Gbade & Co.

- Analyze bank statements and financial records, supporting transaction verification, working-paper preparation, and audit-related documentation.
- Use Excel and Python-oriented workflows to organize, classify, validate, and analyze financial transaction data.
- Apply analytical reasoning to identify inconsistencies, exceptions, transaction patterns, and supporting evidence.
- Support tax-compliance and financial-record processes requiring accuracy, structured documentation, and attention to detail.

Programming Instructor February 2024 – February 2025

NYSC

- Taught foundational programming and web-development concepts to 40+ students through practical coding exercises and guided debugging.
- Translated technical concepts into structured, accessible lessons and supported learners through hands-on problem solving.

Book Registrar May 2022 – December 2022

- Maintained and organized institutional records while improving data accuracy and reducing manual processing errors.
- Introduced workflow improvements that strengthened record-keeping consistency and operational efficiency.

EDUCATION

B.Sc. Mathematics 2018 – 2023

University of Ilorin

PROFESSIONAL VALUE

- Combines mathematical reasoning, audit knowledge, software engineering, and data analysis to solve structured business problems.
- Builds practical automation around real operational workflows rather than limiting development to demonstration projects.
- Strong attention to data accuracy, validation, controls, edge cases, and exception handling.
- Product-minded approach focused on maintainability, reusable architecture, documentation, and workflow efficiency.
